Experience

Software Engineer Intern • Recklabs Services • *Remote*

May 2026 – Present

- Building and shipping an MVP-stage, privacy-first desktop AI product — a Model Context Protocol (MCP) platform that wires custom connectors into Claude Desktop — owning the web, licensing, and distribution layers end to end.
- Built the marketing site and product portal as a server-rendered FastAPI + Jinja2 app on PostgreSQL (SQLAlchemy, Alembic), with JWT/bcrypt auth and a tamper-proof, compiled entitlement gate for licensing.
- Engineered on-demand installer builds: connectors selected at login are compiled per user into a custom Windows .exe via GitHub Actions runners (Inno Setup), with auth-gated delivery and automatic Claude Desktop wiring.
- Hardened distribution by compiling Python connectors to native binaries (.pyd/.exe) with Nuitka for tamper resistance, deployed via Docker Compose on a VPS behind Nginx.

Software Developer Intern • Telecrm • *Aligarh, India*

Aug 2025 – May 2026

- Worked in an Agile team on 14-day sprints, collaborating daily with QA and engineering to prioritise and ship automation improvements on schedule.
- Expanded automated E2E regression suites (Puppeteer, Jasmine, FFMPEG, Allure, AWS S3) and integrated them into the CI/CD pipeline.
- Operated and monitored test pipelines end-to-end, triaging failures, root-causing flakiness, and ensuring reliable execution across every release cycle.
- Upgraded reporting by integrating test-case history into Allure Reports, giving the team clear visibility into release-level trends and failure patterns.

Satellite Payload Designer • SS AMU SAT • *Aligarh, India*

Jul 2024 – Jan 2026

- Collaborated in an interdisciplinary team of 30+ members including faculty, industry engineers, and ISRO scientists to develop a university nanosatellite.
- Implemented and tested the imaging payload on a Raspberry Pi Compute Module 4, handling driver integration, image-capture pipeline, and on-board storage.
- Configured CAN bus communication between the payload and multiple satellite subsystems and sensors.
- Designed geolocation-driven automation to trigger satellite image acquisition based on orbital position.

Backend Web Developer Intern • Orbitalink Pvt. Ltd. • *Aligarh, India*

May 2025 – Jul 2025

- Designed and deployed a CI/CD pipeline using GitHub Actions with separate workflows for production and development environments.
- Built internal REST APIs covering user authentication, session management, role-based admin privileges, and third-party service integrations.
- Led the migration of the system from Flask + SQLite3 to Next.js + PostgreSQL, improving scalability and query performance.

Projects

nCrypt [View](#)

- Flask-based web platform for creating, sharing, and applying custom encryption schemes; deployed on PythonAnywhere with end-to-end HTTPS.
- Engineered RESTful APIs, SQLite data models, and Werkzeug-powered password hashing for secure user and scheme management.

JannSeva [View](#)

- AI-driven healthcare app designed for rural India, supporting 120+ regional dialects via integrated NLP.
- Incorporated weather and air-quality APIs to generate hyper-local, location-specific health insights.
- Implemented OTP-based authentication via Twilio, prioritising accessibility for low-tech and first-time smartphone users.

Skills

Languages: Python, C, C++, JavaScript, TypeScript

Frontend: React, React Native, Next.js, Angular, HTML/CSS, Tailwind CSS

Backend: FastAPI, Flask, Django, Node.js, REST APIs

Databases: PostgreSQL, SQLite, MySQL, MongoDB

DevOps: Docker, Docker Compose, GitHub Actions, Bitbucket Pipelines, Nginx, VPS Deployments, CI/CD

Education

Bachelor of Technology in Computer Engineering

2027

Z.H. College of Engineering and Technology, Aligarh Muslim University
